Clipcademy review study · Answer key

Moderator only. Don't show participants, and don't share scores or answers until after Day 2. One point per correct answer.

Item	Answer	Idea tested	Source
A1	**B**	Strands are antiparallel; new DNA grows 5′→3′	L19-p1
A2	**D**	Nucleotides join the 3′ end	L19-p1
A3	**C**	DNA polymerase can't start a strand, so it needs a primer	L19-p1, L19-p2
A4	**A**	Proofreading acts during copying, mismatch repair after	L20-p1
A5	**C**	A UV bulge stops the gene from being copied or transcribed	L20-p1
A6	**D**	UV repair: recognize, cut out, replace, reseal	L20-p1
A7	**A**	RNA polymerase joins an NTP only if it matches the template strand	L21-p1
A8	**B**	The promoter is where RNA polymerase starts	L21-p1
A9	**D**	The anticodon is complementary to the codon	L22-p1
A10	**C**	A: tRNA enters · P: peptide bond · E: tRNA exits	L22-p2
B1	**C**	Strands are antiparallel; new DNA grows 5′→3′	L19-p1
B2	**B**	Nucleotides join the 3′ end	L19-p1
B3	**A**	DNA polymerase can't start a strand, so it needs a primer	L19-p2
B4	**D**	Proofreading acts during copying, mismatch repair after	L20-p1
B5	**B**	A UV bulge stops the gene from being copied or transcribed	L20-p1
B6	**C**	UV repair: recognize, cut out, replace, reseal	L20-p1
B7	**B**	RNA polymerase joins an NTP only if it matches the template strand	L21-p1
B8	**D**	The promoter is where RNA polymerase starts	L21-p1
B9	**B**	The anticodon is complementary to the codon	L22-p1
B10	**A**	A: tRNA enters · P: peptide bond · E: tRNA exits	L22-p1, L22-p2
